

Board of Professional Geologists

Mission and philosophy

The mission of the Wyoming Board of Professional Geologists is to protect the health, safety, and welfare of the public by promoting the practice of geology by professional geologists and by providing fair and balanced regulation of the geologic profession. This mission is accomplished by licensing only those persons who meet or exceed the minimum statutory requirements of education, experience, and competency necessary to be called professional geologists. This licensing process currently involves examinations to establish an applicant's competency to practice as a professional geologist. The board's regulatory responsibility includes the discipline of professional geologists licensed in Wyoming as well as seeking the prosecution of unlicensed persons who violate the Geologists Practice Act.

The board balances its regulatory responsibilities with service and support to the public, as well as to its licensed professional geologists. The board is objective and ethical, as well as responsive to and considerate of the needs of its various constituents. Quality, cost-effective services are provided, whether for information, testing, professional support, the administrative process of licensing, or other services. Fees charged are those reasonably necessary to support the board's activities in a responsible and accountable fashion.

Major accomplishments & efficiencies

By the end of FY 05, the board had licensed 3,543 professional geologists (some are now deceased and others have not renewed their licenses). At the end of FY 05, there were 2,796 active professional geologists and 60 active geologists-in-training. Since its inception in 1991, a total of 4,231 applications have been received by the board, with 56 applications rejected for not meeting minimum statutory requirements and one for submitting a fraudulent application.

In FY 05, Board staff received 33 applications for licensure; proctored 42 national examinations; processed 27 verification of licensure requests from 12 states; granted licensure to 20 geologists, 15 by examination, and five by comity; and granted certifications to four geologists-in-training. The board distributed rosters (printed and on CD) to licensees, state agencies, county libraries and other parties. "Hits" to the board's web site averaged over 2,632 hits per month for FY 05.

On national and international levels, the Board continued its active role within the Association of State

Minimum of four meetings required per year

Boards of Geology (ASBOG). In FY05, a Board member was elected to ASBOG's Executive Committee and will take the office of President in 2007. The Board had members serving on several committees as well as on the ASBOG Council of Examiners. The number of member states using the national examinations remains at 29. Continued contacts made on the national and international level have expanded the number of working alliances beneficial to the Board.

Although the majority of the geologists licensed as professional geologists in Wyoming reside out-of-state, there are approximately 373 licensed professional geologists who do currently live in Wyoming. Of those who reside outside Wyoming, many have worked in Wyoming in the past, and all anticipate working in the State at some time in the future.

One of the major accomplishments for FY 05, was the implementation of a new licensing software program. Utilizing current technology, this program provides additional functions and capabilities necessary for more efficient handling of applications, renewals, and day-to-day processing of requests from the board's clientele.

Strategic plan changes

As a licensing board, the Board of Professional Geologists is not subject to the strategic plan requirements.

The board focus for FY 06, will be to further expand public awareness and access through continued development of its web site and e-government options, through the implementation of an information program for prospective fundamentals exam candidates, and through the revision and broader disbursement of its consumer pamphlet. The board will pursue contacts on the state, national and international levels to expand the number of alliances beneficial to the board, its licensees, and the general public. The board will act on any complaints received referencing violations of the Wyoming Geologists Practice Act as well as for violations based on professional disciplinary actions taken in other jurisdictions.
